THORMA

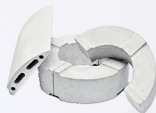

Heat Technology

Make the heat last longer with optional Refractory Concrete.

Refractory Concrete provides clean overnight heating using Thomas optional accumulation refractory concrete panel which stores heat and is then safely dispersed long after the fire has been extinguished. This optional refractory concrete can be installed into a selection of Thoma wood burning stoves and allows a radiated heat from the product of up to nine hours after the fire has gone out.

Radiant heat works like heat from sun creating a feeling of instant warmth and long lasting heat.

The accumulation refractory concrete is available on the Andorra, Andorra Exclusive and the Zaragoza
